The Reducer Seat Insert

Children grow fast! Before you know it, they have outgrown their clothes, shoes and even their wheelchair. For this reason, many parents intentionally select a wheelchair that is one size too large in anticipation of their child's growth - an understandable solution to increase the life span of the chair, and also save thousands of dollars. But, there is a problem with this solution...an oversized wheelchair does not provide the proper positioning your child needs.

The new **Reducer Seat Insert** was specifically designed to provide proper positioning in an oversized wheelchair! The Reducer Seat Insert is a cushion that easily slips into the seat of any chair to reduce the seat width 2 inches. The ribbed surface is comfortable and promotes airflow. It's water resistant, lightweight, and folds flat for storage.

100% Latex Free!

The multi fold design reduces a 16" wheelchair to 14", and a 14" wheelchair to 12"

Easy to use

no additional hardware required

With a standard pair of scissors, it can be trimmed to accommodate your wheelchair's shoulder straps and lateral positioning features.
